

Livestock Breeding and Genomics

Peter von Rohr

18 September 2020

Content

- ▶ Course administration
- ▶ Linear Algebra
- ▶ R/RStudio
- ▶ Introduction to Livestock Breeding and Genomics

Who Is Who

- ▶ Your name
- ▶ Study Major
- ▶ Why this course
- ▶ Previous experiences in animal breeding / R / statistics / ...

Goals

- ▶ Official goals from Vorlesungsverzeichnis
- ▶ Understanding basic concepts such as
 - ▶ selection
 - ▶ breeding value
 - ▶ selection response
 - ▶ difference between production and breeding
- ▶ Be able to explain certain phenomena (see next slide)
- ▶ Better understanding of statistics
- ▶ Exercises in R

Comments from farmers

- ▶ “Deep cow families” (Schweizer Bauer - <https://www.schweizerbauer.ch/tiere/milchvieh/eine-komplette-kuh-zuechten-17854.html>)
- ▶ “I have not met anybody who can explain the concept of a breeding value. My cow has a breeding value of -900 and still gives milk.” (Leserbrief im Schweizer Bauer)

Information

- ▶ Website: <https://charlotte-ngs.github.io/lbgfs2020/>
- ▶ Credit points: Written exam on 18.12.2020

Lecture plan

- ▶ Type G
- ▶ Plan from next week:
 - ▶ exercise hour: 9-10
 - ▶ lecture: 10-12

Course program

Week	Date	Topic
1	18.09	Introduction to Livestock Breeding and Genomics
2	25.09	Review of Quantitative Genetics/Single Locus
3	02.10	Genetic Evaluation with diverse Information
4	09.10	Genetic Covariance Between Relatives
5	16.10	Best Linear Unbiased Prediction (BLUP) - one trait
6	23.10	BLUP - Additional Aspects
7	30.10	BLUP - Multiple Traits
8	06.11	Variance and Inbreeding
9	13.11	Variance Components Estimation
10	20.11	Genomic Selection
11	27.11	Genom-Wide Association Studies
12	04.12	Review on Selection Index Theory
13	11.12	Questions, Test Exam
14	18.12	Exam

Exercises

- ▶ Topics of each lecture are repeated in exercise
- ▶ Exercise hours can be used to work on problems
- ▶ Solutions are presented one week later
- ▶ Exercise platform: (will be available soon)

Your experiences

- ▶ ... in quantitative genetics, statistics, linear algebra
- ▶ Do you know any programming languages, if yes which one?
- ▶ What tools are you using when you work with data (projects, BSc thesis, MSc thesis)
- ▶ Were there any lectures in which you got in contact with programming languages, which ones?
- ▶ Are you interested in learning how to program?

Prerequisites

- ▶ None
- ▶ all concepts will be explained
- ▶ Helpful are
 - ▶ quantitative genetics
 - ▶ statistics
 - ▶ linear algebra
 - ▶ R

Introduction to Livestock Breeding

- ▶ Terminology
 - ▶ Livestock breeding
 - ▶ Animal breeding
 - ▶ Ambiguous use
- ▶ History
 - ▶ Traditional breeding
 - ▶ Genomics

Fundamental Questions

- ▶ What is the best animal?
- ▶ How to find it?

Phenotypes and Genotypes

$$P = G + E$$

where P and E are observed and G is unknown

Improving Animal Populations

- ▶ Improvement via breeding → long-term
- ▶ Two tools
 1. selection
 - ▶ process to determine parents of next generation
 - ▶ natural selection in wildlife and livestock
 - ▶ artificial selection in livestock: fix a goal and rank
 2. mating
 - ▶ which animal is bred to which
 - ▶ extreme
 - ▶ complementary
 - ▶ heterosis - crossbreeding

Statistics

- ▶ BLUP
- ▶ Bayesian methods

Computer Science

- ▶ Methods have been developed in 1940's - 1950's
- ▶ Progress occurred later
- ▶ Development of cheap computing power

Milk Yield

Milk Performance per Cow

(Source: <https://hoards.com/article-20808-what-will-dairy-cows-and-farms-look-like-in-50-years.html>)

Computer Performance

Moore's Law – The number of transistors on integrated circuit chips (1971-2016)

Moore's law describes the empirical regularity that the number of transistors on integrated circuits doubles approximately every two years. This advancement is important as other aspects of technological progress – such as processing speed or the price of electronic products – are strongly linked to Moore's law.
